

Electronic Customs Clearance Services

Capabilities

Subscribe to our world-class electronic transaction exchange service. Clients experience significant upside with improved transaction processing speed and performance while reducing operational costs. Canada Boarder Services Agency (CBSA) uses the Rogue Data transaction exchange system to process its electronic customs documents, making RDC the logical choice for processing electronic customs documents.

Solution

We offer a comprehensive transaction exchange solution and workbench tools for processing the full range of CBSA approved electronic custom PRD documents. Our transaction exchange suite delivers high end user satisfaction with the possibility of a 'hosted' monitoring service that includes robust transaction management controls and error handling. Services also include access to EDS VAN services.

Value

Dramatically reduce traditional implementation challenges with a range of additional value-added transaction exchange services and management tools. Our secure Internet connection directly into the CBSA 'Customs Internet Gateway' (CIG), readily integrating your legacy Customs transactions with CBSA while improving processing, error handling and tracking of clearance documents.

Savings

Providing either a subscription-based competitive fee structure or option to purchase, Rogue Data provides significant financial savings and benefits based on proven technical innovation already shown to cut costs for CBSA and carriers. RDC delivers improved performance through stable long-term relationships with its clients and deep understanding of CBSA workflow and operational requirements.

Benefits

- ✎ Gain compliance with CBSA requirements for electronic Customs document processing;
- ✎ Leverage Rogue Data's core support to CBSA's 'Customs E-Commerce Platform', Rogue Data's customs expertise and its preferred 'Customs Internet Gateway';
- ✎ Increase efficiency and reduce cycle time for CBSA interaction;
- ✎ Migrate from paper fax to fully electronic Internet access for most processes;
- ✎ Experience significant productivity increase by those within your operation who are responsible for processing electronic customs documents;
- ✎ Extend the reach or reduce cost of current Freight Management and Shipping Systems already in use;
- ✎ Increase end-user and your clients' visibility and satisfaction with improved reporting and error handling.

Reduce Operating Costs

- ✎ Access to a variable cost model based on usage;
- ✎ Minimal investment offering an immediate high return;
- ✎ Leverage RDC technology & infrastructure for a complete end-to-end transaction exchange;
- ✎ Reduce operating budget, maintenance and support requirements; and,
- ✎ Benefit from Rogue Data's low cost electronic exchange operations.

Electronic Customs Clearance Services

About Rogue Data Corporation

Rogue Data Corporation is an experienced Canadian company providing high-tech transaction exchange products and services since 1996. The company manufactures and installs award winning, world-class exchange solutions that allow small and medium businesses as well as large institutional clients to securely exchange electronic transactions with trading partners using their own existing systems. Rogue Data translates data originating from disparate programs and databases into uniform messaging standards, and then manages the exchange of these business transactions with any trading partner over the Internet.

The Canadian Federal Government has licensed technology from Rogue Data Corporation to drive CBSA's 'Canadian Electronic Customs Platform' in Ottawa, Canada. This high availability, assured delivery software has been in production since 1998 and has successfully processed over 260 million fully monitored customs transactions with over 3,000 shipping companies, brokers and freight forwarders world-wide without dropping or losing a single transaction in over 6 years.

RDC allows business partners of any size to participate in business-to-business (B2B) and business-to-government (B2G) initiatives. This flexible solution supports leading Internet communication security protocols and over 128 pre-defined CCRA ANSI X12, UNEDIFACT and CADEX translated maps for easy integration into most systems. Rogue Data helps companies process electronic transactions using a secure, risk-free approach to exchange critical electronic information between legacy systems across the Internet. The company has pioneered Canadian healthcare's first bidirectional XML exchange service.

The following are some of the business markets targeted by Rogue Data Corporation:

- ✎ Cargo and conveyance logistics related to customs clearance document management. Rogue Data technology processes over 200,000 Canada Customs documents per day;
- ✎ Healthcare Supply Chain enabling 12 of the largest hospitals in Ontario and British Columbia, processing approximately \$2,000,000 in healthcare orders, acknowledgements and invoices per month with over 200 healthcare suppliers; and,
- ✎ Retail supply chain, such as Wal-Mart Canada specific X12 4030 supply chain interaction.

With representatives in Alberta, British Columbia, Ontario and Quebec, and partnership arrangements in China, we handle thousands of transactions daily. Our extensive list of clients include:

- ✎ Canada Border Services Agency
- ✎ Public Works and Government Services Canada
- ✎ Shared Healthcare Supply Service (University Healthcare Network and Mount Sinai)
- ✎ British Columbia Ministry of Management Services
- ✎ St. Joseph's Healthcare (Toronto)
- ✎ Sunnybrook and Women's Hospitals
